

Health Leadership High School

About Our School

Our Mission

The mission of Health Leadership High School is to equip students with the skills they need to become leaders in healthcare. Through experiential and project-based learning, our students get hands-on exposure and experience in our communities to gain a broad understanding of the social determinants of health.

Health Leadership High School

We provide educational opportunities to students that are innovative and who are geared toward life-long success in pursuit of their post-secondary life goals. This includes providing access to college dual credit programs, paid internships, hands-on learning in the community, and Project-Based Learning (PBL). Through a strongly-developed network of community partners, students are able to take what they learn and apply it through experiential learning and exposure to real-life situations and communities.

Classes at HLHS where our students had their own autonomy while creating various projects

Natural Remedies

During our Natural Healing and Remedies class, we have been working on finding natural cures, including herbal remedies, essential oils, herbal teas, pharmacology, and over the counter medications. It has helped us gain knowledge on natural healing techniques vs. Western Medicine, and how to incorporate them into our daily lives.

Pharmacology

During Pharmacology, we have been learning about the science behind medical drugs and medications. We've learned how to identify different types of medications, compounding, how to make prescriptions, along with learning about the different symbols and abbreviations for the prescriptions.

Paw Paw Panorama "Veterinary"

During our Paw Paw Panorama class, we learned how the 7 Chakra's work throughout the human and animal bodies. We have learned on how certain essential oils are toxic to animals, along with learning which essential oils aren't toxic to animals. We've also had an opportunity to collaborate with the Humane Society.

Equity Council

In our Equity Council we've worked with our fellow peers by handing out surveys regarding what motivates them to come to school. The survey includes a questionnaire following their attendance, participation, and technology policies. This has helped us gather information in order for us to help better understand our school community.
